

# Symantec

Symantec AntiVirus Corporate Edition 10.2 combines industry-leading, real-time malware protection for enterprise workstations and network servers with graphical Web-based reporting and centralized management and administration capabilities. Side-effect repair keeps systems operational during security disruptions. Centralized configuration and deployment eases administrative burden and overhead. Integrated response content helps maximize system uptime.

## Key Features

- Allows advanced, enterprise-wide virus protection and monitoring from a single management console.
- Real-time scanning capabilities automatically detects and removes spyware that attempts to run or install on a machine.
- Effectively protects from spyware and adware.

## Key Benefits

- Microsoft Windows Vista support.
- Symantec tamper protection guards against unauthorized antivirus access and attacks, protecting users from viruses that attempt to disable security measures.
- Integrated Web-based graphical reporting.

## Endpoint Security: Other Products

- Network Access Control
- On-Demand Protection Solution
- Sygate Enterprise Protection
- Critical System Protection
- AntiVirus Enterprise Edition
- Client Security
- Mobile AntiVirus for Windows Mobile
- Mobile Security for Symbian

## Symantec AntiVirus Enterprise Edition

Symantec AntiVirus Enterprise Edition 10.2 provides proactive threat protection for client systems, content filtering, and

spam prevention for the Internet gateway and Domino and Exchange environments, along with malware protection for enterprise workstations and network servers. This comprehensive, easy-to-deploy solution combines award-winning technologies and Symantec's global response infrastructure, providing effective protection at every network tier.

### Key Features

- Integrated suite of Symantec's Mail Security for SMTP, Mail Security for Microsoft Exchange, Mail Security for Domino, AntiVirus Corporate Edition, and Web Security products.
- Provides advanced, enterprise-wide virus protection and monitoring from a single management console.
- Symantec tamper protection guards against unauthorized antivirus access and attacks, protecting users from viruses that attempt to disable security measures.
- Optional integrated add-on Symantec Premium AntiSpam service for Symantec Mail Security products.

### Key Benefits

- Helps organizations obtain protection against the latest detected virus threats.
- Eases manageability; lowers costs by minimizing the number of servers needed to manage diverse groups of clients/servers, and matches the right level of security to specific systems.
- Enables administrations to manage Symantec AntiVirus for SMTP Gateways and Symantec Web Security from anywhere, on many different platforms and reduces the time administrators spend on virus protection.

### Content Filtering & Anti-Spam

Content Filtering & Anti-Spam solutions incorporate patented filtering capabilities to block unwanted content from entering your network—and prevent valuable assets from leaving your organization. Our solutions help minimize the drain on network resources and employee productivity caused by unsolicited commercial e-mail.

### Information Foundation 2007

Symantec Information Foundation 2007 delivers industry-leading protection against information risks and helps reduce the cost of data retention and e-discovery.

### Mail Security for Microsoft Exchange

An integrated, high performance security solution that protects against viruses, spam, and security risks while enforcing company policies on Microsoft Exchange 2000, 2003 and 2007 servers.

### Mail Security for SMTP

Symantec Mail Security for SMTP software features integrated best-of-breed antispam, antivirus, and content filtering technologies to stop spam, viruses, and other email-borne threats at the SMTP gateway

### Mail Security for Domino

High-performance, integrated mail protection against virus threats, spam, and other unwanted content for Domino servers.

#### Premium AntiSpam

Add-on subscription service for Symantec Mail Security products, powered by Brightmail technology and response.

#### Mail Security 8300 Series

Integrated best-of-breed antispam, antivirus, and content-filtering technologies to stop spam, viruses, and other email-borne threats.

#### Mail Security 8200 Series

Integrated best-of-breed antispam, antivirus, and content-filtering technologies to stop spam, viruses, and other email-borne threats.

#### Mail Security 8100 Series

Email security appliance controls spam traffic by stopping unsolicited email before it enters your network.

#### Mail Security Enterprise Edition

Best-of-breed antispam, antivirus, and content filtering protection for the SMTP gateway and groupware tiers in a single bundled offering that features flexible deployment options.

#### IM Manager

Seamlessly manages, secures, logs, and archives corporate instant-messaging traffic with certified support for public and enterprise IM networks.

#### Hosted Mail Security

Hosted email security solution powered by industry-leading anti-spam and antivirus technologies.

#### Web Security for Microsoft ISA Server 2004

High-performance, reliable virus and spyware protection, and URL filtering for web traffic served through the ISA Server.

#### Mail Security for Domino Multi-Platform Edition

High-performance, integrated mail protection against virus threats, spam, security risks, and other unwanted content on Domino databases.

#### AntiVirus Gateway Solution

Comprehensive virus protection, spam prevention, and content filtering for Web and email traffic at the Internet gateway.

Brightmail AntiSpam

Accurate, effective, and easy-to-manage protection against spam, email fraud, viruses, and other unwanted email at the Internet gateway.

Web Security

High-performance scanning for viruses and inappropriate content using leading antivirus and filtering technologies at the web gateway.

Firewall / VPN

Firewall / VPN solutions make it easy to communicate securely with customers, partners, employees, and remote users. From advanced software solutions to all-in-one integrated security appliances, the Symantec firewall and VPN family provides the flexibility to choose just the right level of network protection.

Client Security

Holistic solution proactively protects against malware through robust client protection, centralized management, and ease of administration.

- Purchase Online

Sygate Enterprise Protection

Advanced endpoint protection and seamless integration with network access control in a single management architecture.

Personal Firewall for Macintosh

Hides Mac OS X clients from attacks, blocks online intrusions, and protects sensitive data.
