

# McAfee

Capture and eliminate threats across your network. Shield your extended enterprise network with comprehensive, multi-tiered virus protection for every system—from desktops, file servers, e-mail servers, and Internet gateways to remote and wireless devices.

## McAfee Security Suite Solutions

### McAfee Total Protection for Enterprise—Advanced

Comprehensive security and network access control in one solution Our advanced version gives you the broad scope of protection and streamlined manageability of our standard solution—with the added benefit of network access control. Keep noncompliant systems away from your network and assets and enforce policies more effectively.

### McAfee Total Protection for Enterprise

Centrally managed, end-to-end protection in one solution Get broad protection without the complexity, expense, and headaches of multiple standalone products. One solution gives you full coverage—anti-spyware, anti-virus, anti-spam, firewall, and intrusion prevention—with simplified single-console management.

### McAfee Active Virus Defense

Virus protection across all network tiers McAfee® Active Virus Defense offers comprehensive anti-virus coverage for all tiers of your network - virus protection software at the desktop, Internet gateway, email server, and file server levels - plus centralized policy management and reporting through McAfee® ePolicy Orchestrator®.

### McAfee Active Mail Protection

Multi-layered defense against e-mail-borne threats Take advantage of a multi-layered defense against e-mail threats wrapped into one package—with anti-virus protection, spam blocking, and content filtering.

### McAfee Active VirusScan

Desktop and file server virus protection in a single, integrated solution. This integrated suite delivers extended virus and threat protection for desktops and file servers. It also scans e-mail, FTP, and Web connections at the client level.

## Anti Virus

Capture and eliminate threats across your network

Shield your extended enterprise network with comprehensive, multi-tiered virus protection for every system—from desktops, file servers, e-mail servers, and Internet gateways to remote and wireless devices.

#### File servers and desktops

Comprehensive protection for your network assets McAfee anti-virus products defend your desktops and file servers with complete proactive protection, identifying and capturing the latest exploits, viruses, worms, and Trojans—such as Sasser, My Doom, and Bagel—before they affect your users, systems, and vital corporate data.

#### E-mail server

Block inbound threats with e-mail security E-mail is often the culprit for the distribution of malicious programs across your network. With multi-layered protection, our e-mail security protects your e-mail servers against costly network downtime, reduced productivity, and compromised data.

#### Internet gateway

Scan and block threats before they reach your network Comprehensive protection begins when you scan all of your inbound and outbound traffic. Our Internet gateway suites, services, and appliances help you stop malicious attacks at the gateway to your network, before they harm your business-critical systems.

#### SharePoint protection

Share data without exposure to malicious attacks Computing platforms that support information sharing can leave your enterprise vulnerable to attack. Our collaborative environment products shield these systems from exploits, viruses, worms, and inappropriate content that can wreak havoc throughout your network.

### McAfee Products/Modules

#### Anti Spam Solutions

Keep spam from draining your resources

Up to 80 percent of your e-mail is spam and other unwanted content. Don't let it affect productivity and put a strain on your resources. McAfee offers comprehensive, accurate e-mail and Web security solutions that protect your network and workforce from spam, phishing, and other threats.

#### McAfee SpamKiller for Mail Servers

Block spam before it gets to your users Keep spam and inappropriate content away from your Microsoft® Exchange and Lotus® Domino® mail servers for improved network performance and employee productivity.

#### McAfee SpamKiller for SecurityShield

Block spam on your ISA Servers before it gets to your users Score and remove spam and phishing content at your Microsoft® ISA server with accurate scanning. Intercept more than 97 percent of all possible spam with few false positives.

#### McAfee Secure Messaging Service for Enterprise

Block e-mail-borne attacks in their tracks Prevent spam, viruses, phishing scams, and directory harvest attacks from entering your network with this convenient, hassle-free email filtering service.

#### Secure Internet Gateway

High-performance protection against spam, viruses, and data loss Easy to install and virtually maintenance-free, this convenient appliance protects you from spam, viruses, and other exploits with a high degree of accuracy. It also helps safeguard vital company information and ensure compliance with email privacy regulations.

#### McAfee SpamKiller for SecurityShield

Block spam on your ISA Servers before it gets to your users Defend your Microsoft® ISA servers from spam and viruses and filter content—with one integrated solution. It also includes reporting and centralized policy management.

#### McAfee Secure Messaging Gateway

Block spam and other threats with easy-to-install security appliance Block spam, viruses, Trojans, worms, and prevent inappropriate content from passing through your internal e-mail—all on a single appliance, McAfee® Secure Messaging Gateway.

#### Anti Spyware

#### McAfee AntiSpyware Enterprise

Neutralize spyware before it takes root and spreads Protect your users and systems from spyware programs before they get a foothold. McAfee® AntiSpyware uses on-access scanning technology to detect spyware programs and prevent them from installing.

#### Host Intrusion Prevention

#### McAfee Host Intrusion Prevention for servers

Maximize server uptime. Guard critical assets. Maintain business availability. Protect the availability, confidentiality, and integrity of your business-critical servers. With a single agent and a centralized management console, McAfee® Host Intrusion Prevention is easy to deploy, configure, and manage locally and globally.

#### McAfee Host Intrusion Prevention for desktops

Enforce policies, set firewall rules, and keep desktops safe Our Host IPS features a desktop firewall that strictly defines connectivity rules and keeps noncompliant systems out. It also blocks threats that enter from applications or USB media.

Encryption

Transfer and store your sensitive files securely

Your data is the lifeblood of your business. Files with sensitive data need to be protected in transit and in storage for true end-to-end security. More than half of all Fortune 500 companies rely on McAfee E-Business Server—based on the trusted Open PGP® standard—for secure file transfer and storage.
